YOGESH M S

SOC Analyst | Cybersecurity Enthusiast

9597972454 | yogeshms.sec@gmail.com | linkedin.com/in/yogesh-m-s

PROFESSIONAL SUMMARY

Cybersecurity fresher with a B.E. in Cyber Security and hands-on experience building SOC lab environments, analyzing logs in Splunk, and investigating security incidents end-to-end. Skilled in threat detection, log correlation, IOC analysis, and incident-response workflows through self-driven projects and internships. Seeking an entry-level SOC Analyst role to apply detection engineering and log-monitoring skills in a live security operations environment.

TECHNICAL SKILLS

- SIEM & Log Analysis: Splunk (SPL queries, correlation searches, custom detection rules), Log Monitoring
- Endpoint & Network Security: Sysmon, Endpoint Telemetry Analysis, IDS, Network Traffic Analysis
- Threat Detection: Threat Hunting, IOC Analysis, MITRE ATT&CK Framework, Phishing/Email Investigation
- Incident Response: Alert Triage, Incident Documentation, SOC Triage Procedures
- Security Testing: Burp Suite, Vulnerability Assessment, OWASP Top 10, VAPT Reporting
- Scripting & Tools: Python (log parsing & automation), Linux Command Line, Wireshark basics

PROFESSIONAL EXPERIENCE

Python Project Intern | *Cybernaut EdTech Private Limited* Nov 2025 – May 2026

- Completed a 6-month internship developing Python automation scripts that reduced manual data-processing and log-parsing time by an estimated 20–25%.
- Built reusable modules to extract, clean, and structure data across 3 file formats (CSV, JSON, log files) for downstream analysis — a workflow directly applicable to SIEM log handling.
- Collaborated in a cross-functional team to test, debug, and document project deliverables across the full 6-month engagement, maintaining professional coding and reporting standards.

Penetration Testing Intern | *Pargavan Cyber Solutions* Jul 2025 (15 days)

- Completed an intensive 15-day hands-on program covering networking & hacking fundamentals, target footprinting, and Linux server command handling.
- Practiced enumerating and exploiting running services in a controlled lab across multiple target systems; studied all 10 categories of the OWASP Top 10 attack techniques.
- Used Burp Suite to intercept and manipulate HTTP requests/responses, contributing findings to a formal VAPT (Vulnerability Assessment & Penetration Testing) report.

PROJECTS

Home SOC Lab – Threat Detection & Log Monitoring | *Personal Project* 2026

- Set up a mini Security Operations Center lab using Splunk to collect, correlate, and monitor endpoint and network logs.
- Configured 3 custom detection rules covering brute-force login attempts, suspicious process execution, and unauthorized file-access events.
- Investigated generated alerts end-to-end and documented a sample incident-response workflow from detection through remediation.

Phishing Email Investigation & IOC Analysis | *TryHackMe SOC Simulator* 2026

- Investigated a simulated phishing alert on TryHackMe's SOC Simulator using Splunk to triage and analyze the incident.
- Examined email headers, embedded URLs, and attachments to extract and validate malicious indicators of compromise (IOCs).
- Correlated related log events to reconstruct the attack timeline and documented findings following standard SOC triage procedure.

Event Log Threat Hunting | *Personal Project* 2025

- Installed Sysmon on a Windows VM to generate endpoint telemetry across 3 categories (process creation, network connections, registry changes) and forwarded logs to Splunk for centralized analysis.
- Performed manual threat hunting to identify suspicious parent-child process relationships, unsigned binaries, and abnormal outbound connections.
- Created custom Splunk detection searches based on hunting findings, validated against known attack behaviors referencing MITRE ATT&CK.

CERTIFICATIONS

- Google Security Operations – SOAR Analyst, Google (Jul 2026)
- Certified Cyber Security Officer (CSCSO), EU Cyber Academy (Dec 2025)
- Certificate of Achievement – Ethical Hacking & Cybersecurity, HackerX (2025)
- Certificate of Participation – "OS – Bug Bounty Challenge" National-Level 36-Hour Hackathon, C-DAC Chennai (Jul 2026)

EDUCATION

B.E. – Cyber Security CGPA: 7.60

Paavai Engineering College
